Lowie and Lowieze are perfect examples of form blending with function. The basic shape here is the cylinder. The two bulb housings – which are also cylindershaped – on either side of the body can rotate fully on their axis and thus be used as an uplighter or a downlighter. What's more, the two bulb housings can be moved individually, meaning you can use one fixture to simultaneously light two places. Lowie and Lowieze also come in a one-lamp version, with only one bulb housing on the cylinder.
